

Kwalificatiecertificaat LNG

Blended training for skippers and crew members who sail with LNG as fuel

Follow the blended training for the LNG qualification certificate at STC Next. E-learning, practical day, theory and practical exam for sailing with LNG as fuel.

About this course

Location	Lloydstraat - Rotterdam
Language	English
Education Format	Classroom + online
Type	Basic
Erkenning	CBR

General information

STC Next offers a unique blended course for the LNG qualification certificate, available in Dutch and English.

The training is intended for skippers and crew members of inland vessels who use LNG as a fuel and are involved in the bunkering procedure. They must have the Certificate of Qualification for Inland Navigation – Expert in the field of liquefied natural gas (LNG).

The course starts with an e-learning that participants follow at their own pace and at a time of their own choosing. In this way, they prepare for the theory exam and build up the necessary knowledge about LNG as a fuel, safety and procedures.

This is followed by a classroom practical day at STC Next. During this meeting, participants practice the bunkering procedure on the cargo simulator and work with a practical set-up. The theory and practical exam will also take place on the same day.

After passing both exams, participants receive the LNG diploma from the CBR. This gives them access to the bunker zone to attend two LNG bunkering operations. These bunkers are part of the application for the official LNG qualification certificate.

Programme

The training consists of a combination of online learning, classroom practical training and examination.

E-learning

Participants start with the online theory. They follow this e-learning independently, at their own pace and at a time that suits their work schedule. The e-learning prepares participants for the theory exam.

Classroom practical day

After the e-learning, participants come to STC Next for a practical day. During this meeting, they practice the bunkering procedure on the cargo simulator and work with a practical set-up.

Theory and practical exam

On the same day, participants take the theory and practical exam. After successfully completing both exams, they receive the LNG diploma from the CBR.

Attending two LNG bunkering sessions

With the LNG diploma, participants gain access to the bunker zone. They then attend two LNG bunkering operations. These are registered and are required for the application of the official LNG qualification certificate.

Result

At the end of the training, participants have prepared themselves for working with LNG as a fuel and for the associated bunkering procedure.

After passing the theory and practical exam, participants receive the LNG diploma from the CBR. With this diploma, they gain access to the bunker zone to attend two LNG bunkerings.

After registration of these bunkering facilities, the official LNG qualification certificate can be applied for. With this certificate, skippers and crew members involved demonstrate that they meet the requirements for sailing with LNG as a fuel in inland navigation.

Target audience

This training is intended for skippers and crew members of inland vessels who use LNG as fuel and are involved in the bunkering procedure.

The course is suitable for participants who:

- sailing on a ship that uses LNG as fuel;
- LNG bunkering procedure;
- want to prepare for the LNG theory and practical exam;
- want to obtain the LNG diploma from the CBR;
- want to work towards the official LNG qualification certificate;
- want to increase their knowledge about LNG as a fuel, safety and procedures.

Practical information

Type of training **Basic course/training, E-learning**

Duration **1 day and preparatory self-study**

Language **English, Dutch**

Exams **Yes (theory and practice)**

Course code **BLNG**

Please note: participants must obtain at least 70% for the theoretical test to be allowed to participate in the practical day.
